

# Hosted PBX

## *Built-In: Unlimited Support & Upgrades, Redundancy & Unlimited Training*

You can rest assured that the same service you have on day one will continue throughout the entire time that you are using it.

**Efficiency and Affordability:** JEP Hosted PBX is the smartest choice for your business phone service. It eliminates the burden of purchasing and maintaining a costly hardware-based PBX, while enabling you to focus on maximizing the growth and profits of your business. JEP Hosted PBX behaves like a traditional business phone system, but it is built and maintained in a secure cloud environment.

**Reliability:** JEP Hosted PBX delivers crystal-clear solutions for your company through environments composed of reliable, carrier-grade network hardware and software, manufactured by the strongest firms on the market, such as Cisco™, BroadSoft™, IBM®, and ACME Packet™. It is deployed as a geo-redundant solution engineered with multiple redundant direct connections to our underlying providers, meaning your system runs in a highly available environment.

**Minimal Capital Expense:** At JEP we leverage economies of scale to deliver a low cost solution. You only pay for phones, licenses, and monthly usage of local and long distance calling. What this means is that you can freely and easily add or remove phones and licenses at any time to fit your company's needs, and your monthly costs will adjust accordingly.

**Integration:** JEP has a plethora of features that enable integration through hosts of software: ESNA is a chrome plugin dialer which boasts presence and call features that enable click to dial through your computer's browser. It's powerful features can further be tied into the well know CRM Salesforce®. With these three powerhouses in cloud communications and customer relationship management, any organization will quickly realize their priceless benefits.
