

SIP Trunking

The New Standard:

With the emergence of low-cost broadband and VoIP-enabled data networks, SIP Trunking is rapidly becoming the standard for interconnecting premise-based phone systems to the public switched telephone network. JEP SIP Trunking enables you to reduce phone and broadband charges by consolidating them into one affordable competitive package. This can be done easily while maintaining your current investment in your traditional PBX and digital phones.

Business Continuity:

Disasters happen. A hurricane, major power outage, or anything that forces your employees to work from an alternate location can be extremely disruptive to your business. Your company requires business continuity planning to ensure that customer calls do not go unanswered. By replacing your traditional phone lines with JEP SIP Trunking, you will be able to immediately redirect calls at the carrier level to a second physical location where your business can resume as normal.

Multi-Site Support:

Whether your company has two or two thousand locations, JEP SIP Trunking can enhance the capabilities of your PBX. Your company's multiple locations can be included in the same enterprise, enabling extension-to-extension dialing regardless of their location—across the street or across the country. This allows your company to operate more efficiently and reduces the amount of abandoned calls and frustrated callers.

With JEP SIP Trunking, you can seamlessly and affordably transition to a cloud-based voice service without having to replace your existing legacy PBX. This enables you to retain your investment in digital phones while realizing the cost benefits of consolidating your voice and data services. In addition, your company can take advantage of the competitive long distance and toll charges offered by JEP SIP Trunking.

SIP Trunking

SIP Trunking: A router is placed between your current legacy PBX and your secure data connection to the JEP environment. The costly phone carrier and additional line can be removed from the equation, consolidating your communication charges and allowing you to take advantage of JEP's unparalleled features and rates.

Out With The Old In With The Cloud.
